

Design for the Environment Textiles

The Design for the Environment protocol is a fundamental part of the Herman Miller product development process. Herman Miller Textiles are evaluated and optimized for human and environmental impacts.

This document will show which textiles meet the criteria for the following standards: Living Building Challenge (LBC) Red List, WELL Building Standard v2, and BIFMA Targeted Chemical Elimination.

Living Building Challenge Red List

Herman Miller makes every reasonable effort to ensure that the data is accurate and current. The information Presented as Red List Free indicates that the chemical is not Present in the product above 100ppm.

Full Red List and CAS# can be found [here](#).

WELL Building Standard™ Version 2

X05 Enhanced Material Restrictions:

- Textiles and plastics contain 100 ppm or less of HFRs, PFAS, Lead, Cadmium, and Mercury

X06 VOC Restrictions:

- Meets CDPH Standard Method v1.2 or ANSI/BIFMA e3-2014, sections 7.6.1 or 7.6.2

X08 Materials Optimization:

- Free of compounds listed in the Living Building Challenge's Red List

BIFMA Targeted Chemical Elimination (TCE)

Textiles have been vetted against the following list of chemicals per BIFMA's Targeted Chemical Elimination (TCE):

- Flame Retardants (FR): Product does not contain added flame retardant chemicals at levels above 1,000 parts per million by weight of the homogeneous material, excluding electrical components.
- Formaldehyde and other VOCs: product conforms to the criteria of ANSI/BIFMA e3-2011 7.6.1 and 7.6.2.
- PFAS: Must not use stain or water repellent treatments that contain per- or poly-fluorinated alkyl substances at or above 100 ppm.
- PVC: Product contains less than 1% of polyVinyl chloride (PVC) by weight, excluding electrical components.
- Antimicrobials: Must not contain any added antimicrobials. Triclosan and triclocarban are explicitly prohibited for all uses.
